Today's Lineup App

Background

The Client has been an active enthusiast of the Baseball community. He came up with the idea to advance the baseball pre-game management system. The client requirement was to develop an IOS/Android app for league coaches and manager to line up their team members and share pdf files with the organizers. He wanted a universal app that makes pre-game strategy simple to set the lineup and position players over iPhone, iPad or Android phone and tablet.

Solution

The GCT developed an app for youth league coaches and managers. This app helps team coaches for batting line-ups and in positioning players for youth baseball tournaments. The app supports iPhone/iPad plus Android phones and tablets and makes baseball game management easy and organized.

The app has the ability to edit available positions and allow managers to add extra players/ outfielder. It eliminates paper work and reports can be saved and shared as a PDF or compatible excel file for the league. The app can sync between the phone and tablet and can be accessed from anywhere.

The app has the following features:

1. Create account
2. Create the team
3. Set the lineup
4. Add, drop, move the lineup around with ease
5. Set games, locations, dates and times
6. Set the player positions for every inning
7. Export to PDF or compatible Excel file
8. Print the lineup for the dugout and other team
9. Sync data across other mobile / tablet devices every time you log out

The App is a social platform for coaches and managers. On the **technical front**, the Apps utilize PHP /Objective C /Java and SQLite server.

The Native application can be experienced at:

Results

1. The app has gained a dedicated fan following in the Baseball community with a very active and engaged user base.
2. The app has provided an ideal game management app for little league and youth league managers and coaches.
3. It has helped coaches and managers in saving time, and Touch screens have enabled last minute changes in lineup simply by dragging the order around.
