## ANNECTO App

### Background

The client wanted to develop an application that allows the user to search and connect with professionals at events, up in the air, or anywhere, who share the same networking/career interests. Annecto was targeted for iOS and Windows devices. The idea was to build an app that suits all the networking needs of a user.

### Solution

The GCT team designed and developed an iOS, Windows app that combines a geological platform with an advanced search engine to facilitate human interaction in a new way.

### **Annecto app has the following features:**

1. It allows you to connect with nearby professionals.
2. It allows you to connect with professionals at any conference/event in the world.
3. It allows you to connect with onboard passengers while travelling.
