BodyShuffle App

Background

The client wanted to create an entertainment and photo app for the users of all age groups. This app was supposed to be targeted for iOS devices, and the idea was to put laughter and amusement at the user's fingertips by allowing the users to swap body parts with friends and family.

Solution

The GCT team built the BodyShuffle app that lets its users take photographs of their friends, family, and pets and then swap out heads, torsos, and legs to create endless hilarious mash-ups.

BodyShuffle app has the following features:

1. Snap photos of your friends, family, and pets.
2. Swap in and out different torsos, heads, and legs with just a swipe of your finger.
3. Size each section as needed with pinch-zoom for a seamless swap.
4. Share your favourite swaps on Facebook, Twitter, Flickr or email with the click of a button.
5. Shuffle or shake your device to generate endless shuffling fun in a snap.
